

## AUDI BRUSSELS AUTOMOTIVE

### PROJECT DESCRIPTION Link with the finishing line.

Widening of the paint workshop with parallel flow, enabling integration of a second colour on each car. For this, the doors are stored in an automatic sorting warehouse and are inserted after the second varnish (roof). Thanks to this integration, Audi can supply cars in different colours to their customers.

Technology : conveyor belts, lifts, turning plates, SCIK scanner, light curtain, HMI, data scanner, Siemens S7 Safety, Sutron, Profibus DP, TCP/IP, Encoder, SEW Movimod, SEW Movidrive, SEW Movifit, Lenze Drive, RF300, Moby-U, Moby-I...
